

OpportunIQ

Personalized Opportunity Intelligence & Deadline Guardian Agent

Team ID: H26EDU11

Amrita Vishwa Vidyapeetham

Project Details

- **Project Title:** OpportunIQ
- **Thrust Area:** AI for Education
- **Hackathon:** TATA Centre AI/ML Hackathon 2026
- **Venue:** NIT Tiruchirappalli

Team Details

- **Team Lead:** Anantha Ram G S
- **Team Member:** Gowri J S
- **Team Member:** Sanjay Anand M

Problem Statement & Objectives

Problem 1: Fragmented Opportunity Discovery

- Career opportunities are scattered across LinkedIn, Naukri, Unstop, Devfolio, HackerEarth and company portals.
- Students spend significant time searching multiple platforms manually.
- Relevant opportunities are often discovered late or missed entirely.

Problem 2: Missed Application Deadlines

- Application updates and deadlines are buried across multiple emails.
- Interviews, submissions and offer acceptance windows are easily overlooked.
- No intelligent system proactively tracks deadlines and reminds students.

Objectives of the Proposed Solution

- 1 Build an AI-powered platform that aggregates and recommends opportunities based on each student's profile.
- 2 Rank opportunities using skill relevance, user preferences and deadline priority.
- 3 Extract application deadlines from Gmail and provide proactive reminders.

Existing Solutions and Identified Gaps

Existing Solutions

- **JobSpy:** Multi-platform scraping without AI ranking, personalization or reminders.
- **Job Aggregators:** Unified listings with limited personalization and no deadline tracking.
- **ResumeFlow:** LLM-based resume tailoring for specific jobs only.
- **AI Internship Recommenders:** Static datasets with basic similarity matching.
- **Agentic Resume Evaluators:** Resume analysis without opportunity discovery.
- **Gmail LLM Labelers:** Email categorization without deadline intelligence.

Identified Gaps

- ✗ No unified discovery across jobs, internships and hackathons.
- ✗ No semantic skill matching or personalized ranking.
- ✗ No cross-platform duplicate removal.
- ✗ No Gmail-integrated application tracking.
- ✗ No automatic extraction of career deadlines.
- ✗ No end-to-end agentic workflow from discovery to reminders.

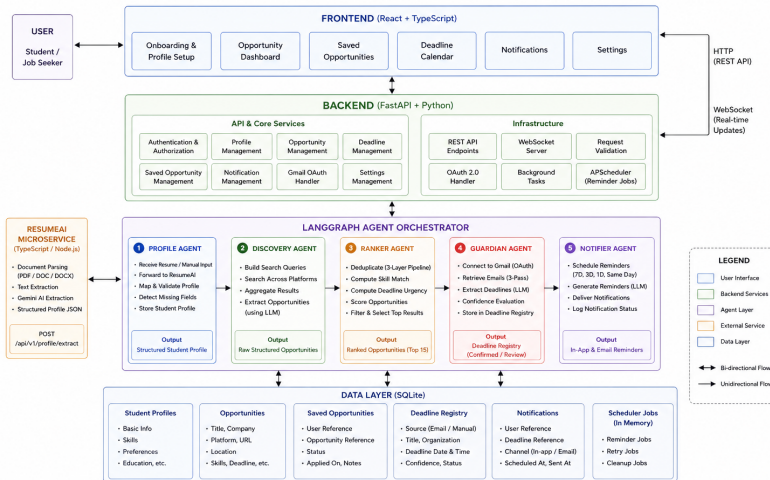

OpportunIQ's Contribution

Unified AI platform combining personalized discovery, semantic ranking, duplicate removal, Gmail deadline extraction and proactive reminders.

System Architecture

OpportunIQ – System Architecture

Agentic AI Platform for Opportunity Discovery and Deadline Management

Implementation Progress

Completed

- ✓ API credentials configured
- ✓ ResumeAI microservice integrated
- ✓ Embedding model pre-downloaded
- ✓ Development environment configured
- ✓ Demo Gmail dataset prepared
- ✓ SQLite database schema finalized
- ✓ System architecture & Build Plan completed
- ✓ LangGraph workflow designed

In Progress

- FastAPI backend implementation
- React + Tailwind frontend
- Profile Agent integration
- Discovery Agent: JobSpy + Tavily
- Ranker Agent implementation
- Guardian Agent: Gmail scan
- Notifier Agent: APScheduler
- Dashboard development

Current Build Focus

Backend agent pipeline, profile extraction flow, opportunity discovery, dashboard UI and deadline reminder workflow.
